**Description**

For the prevention and treatment of viral diseases of bees (acute and chronic paralysis, cytotobacteriosis and others), stimulation of growth, development and increase of resistance to adverse environmental factors

Powder from gray to light brown, which includes: amino acids, micro-elements, garlic extract, ascorbic and nicotinic acids, vitamin A, B vitamins, biotin and sucrose. The substances that make up the feed have a clear antiviral effect in the body of the bee and cause an increase in the resistance of bees to adverse effects, which is expressed in a more dynamic development of bee colonies.

Antivir is used for bees mixed with sugar syrup to prevent and treat viral diseases, in spring (April-May) and late summer (August-September) during the period of building up the strength of families before the main honey collection, with insufficient pollen bribe or insufficient stocks of bee bread in the hives and preparing them for the winter.

The drug is dissolved in warm (35 - 40 °C) sugar syrup, prepared in a ratio of 1: 1, at the rate of 40 g of Antivir per 10 liters. sugar syrup.

The prepared syrup is poured into the upper hive feeders at the rate of 1 liter of syrup per family and applied 2-3 times with an interval of 3-4 days.

**Honey collected by the families that received food can be used for food.**

**WITHOUT ANTIBIOTICS**

**Expiration date:** 3 years from the date of manufacture

Weight: 40 grams
